

comp484-hw10-ramey

Debug JavaScript

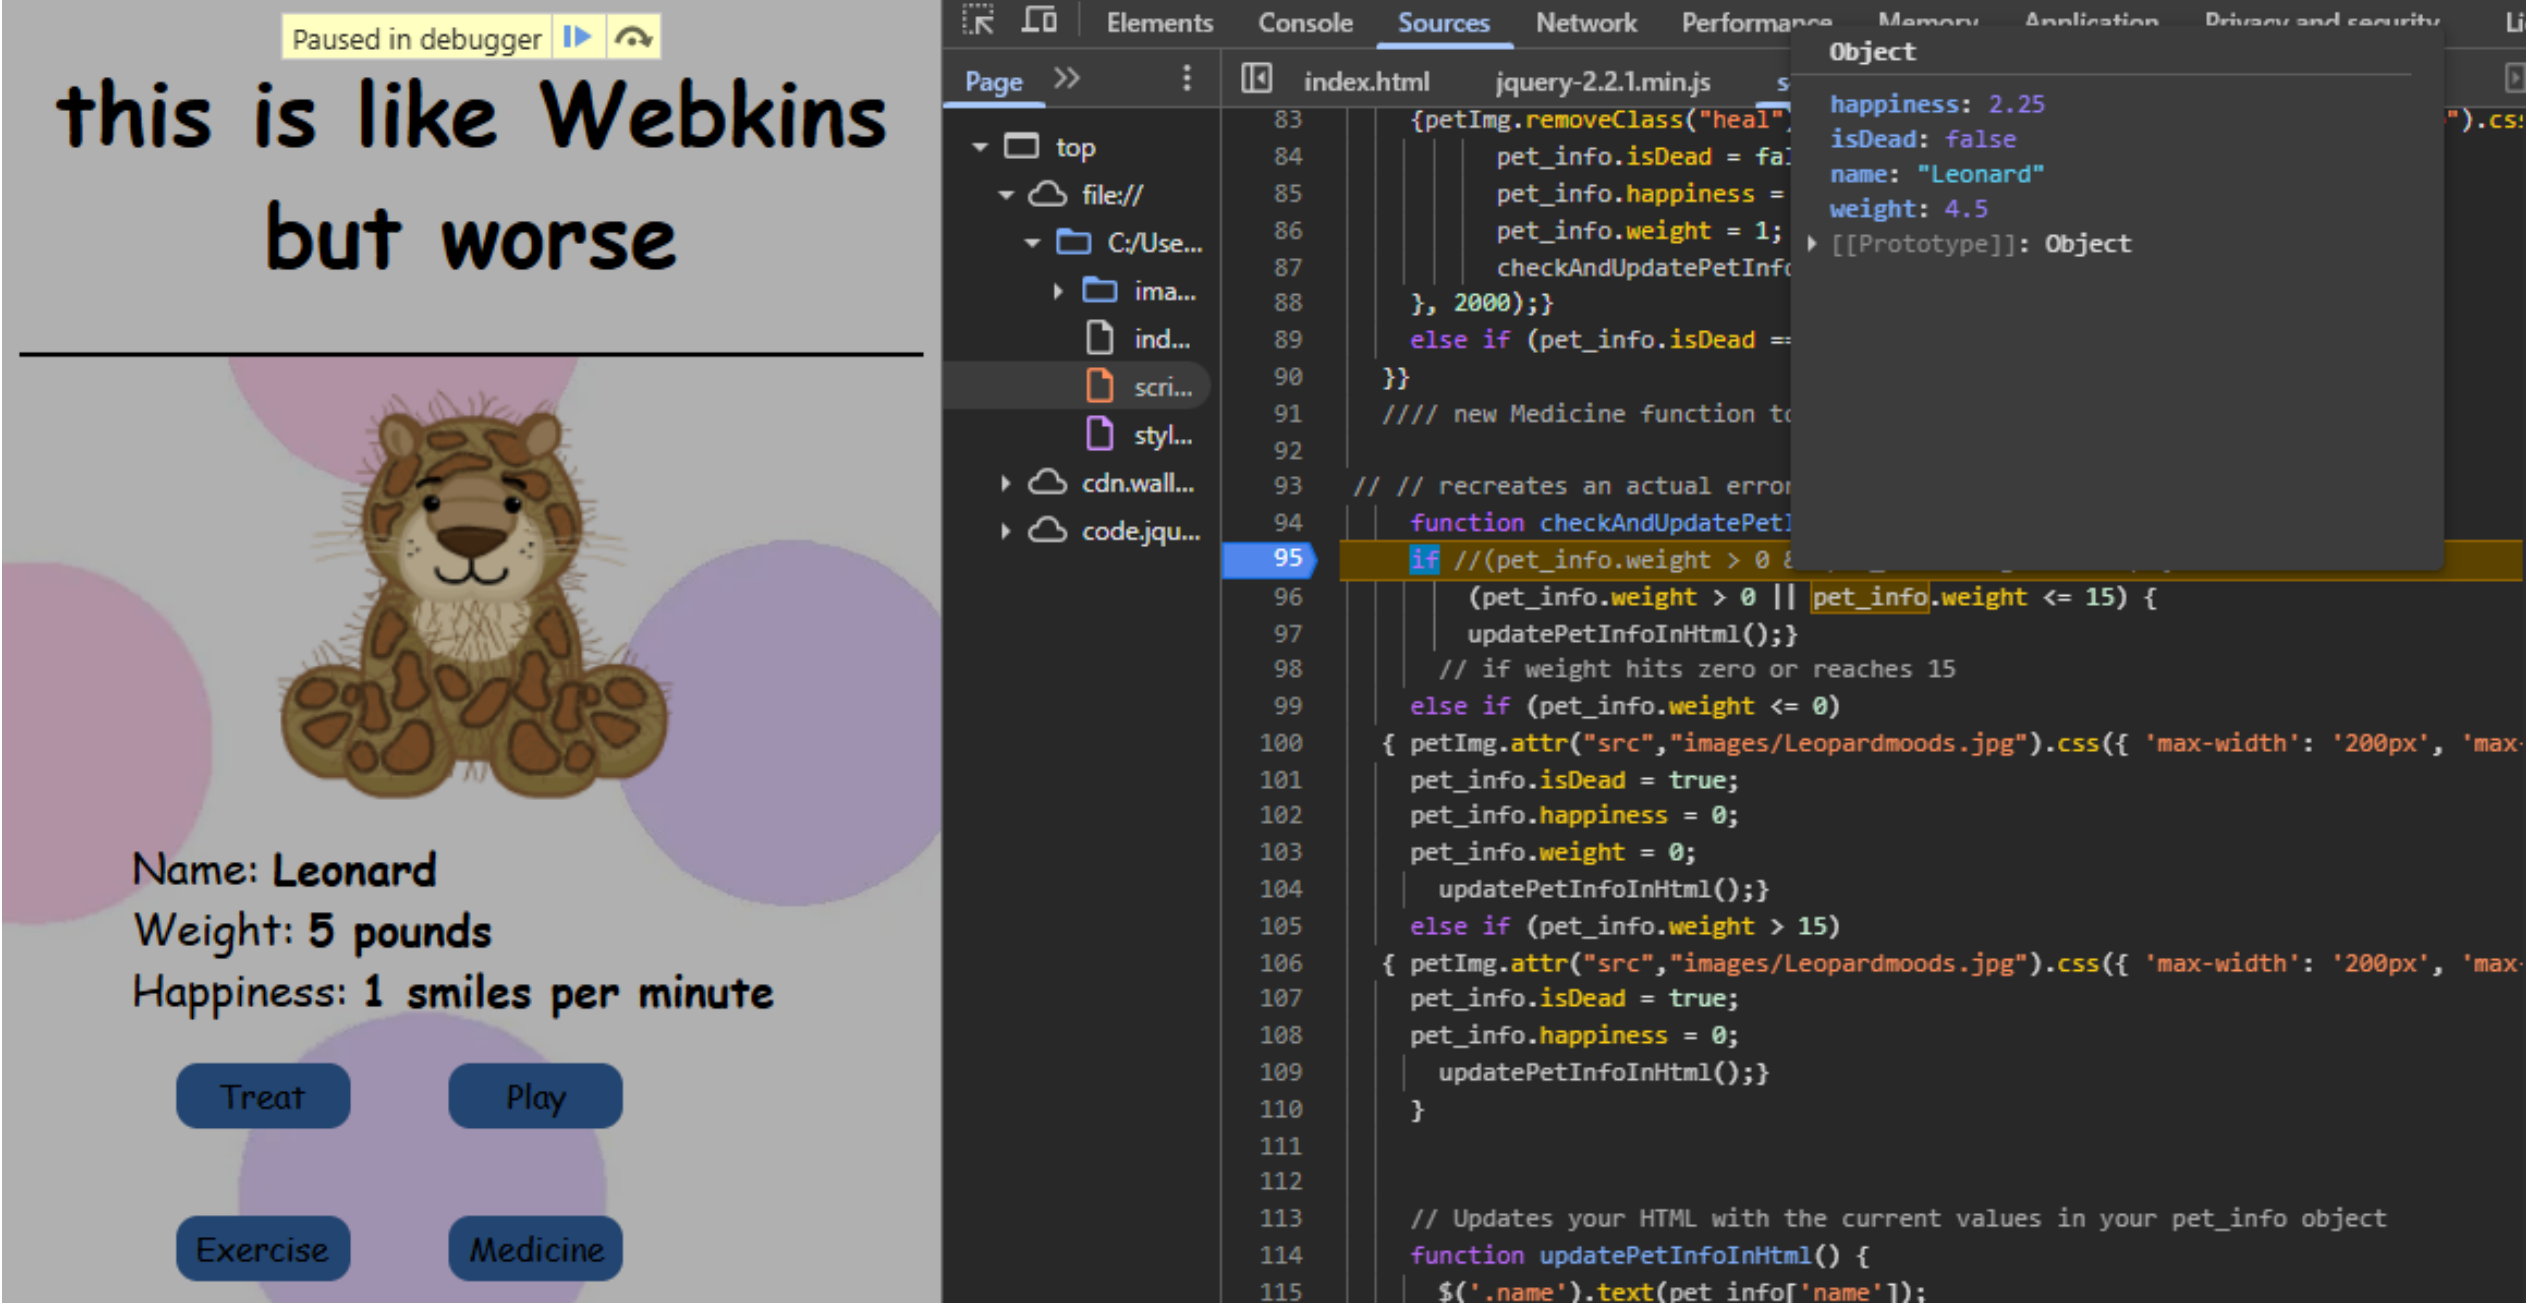

1. name entry does work correctly

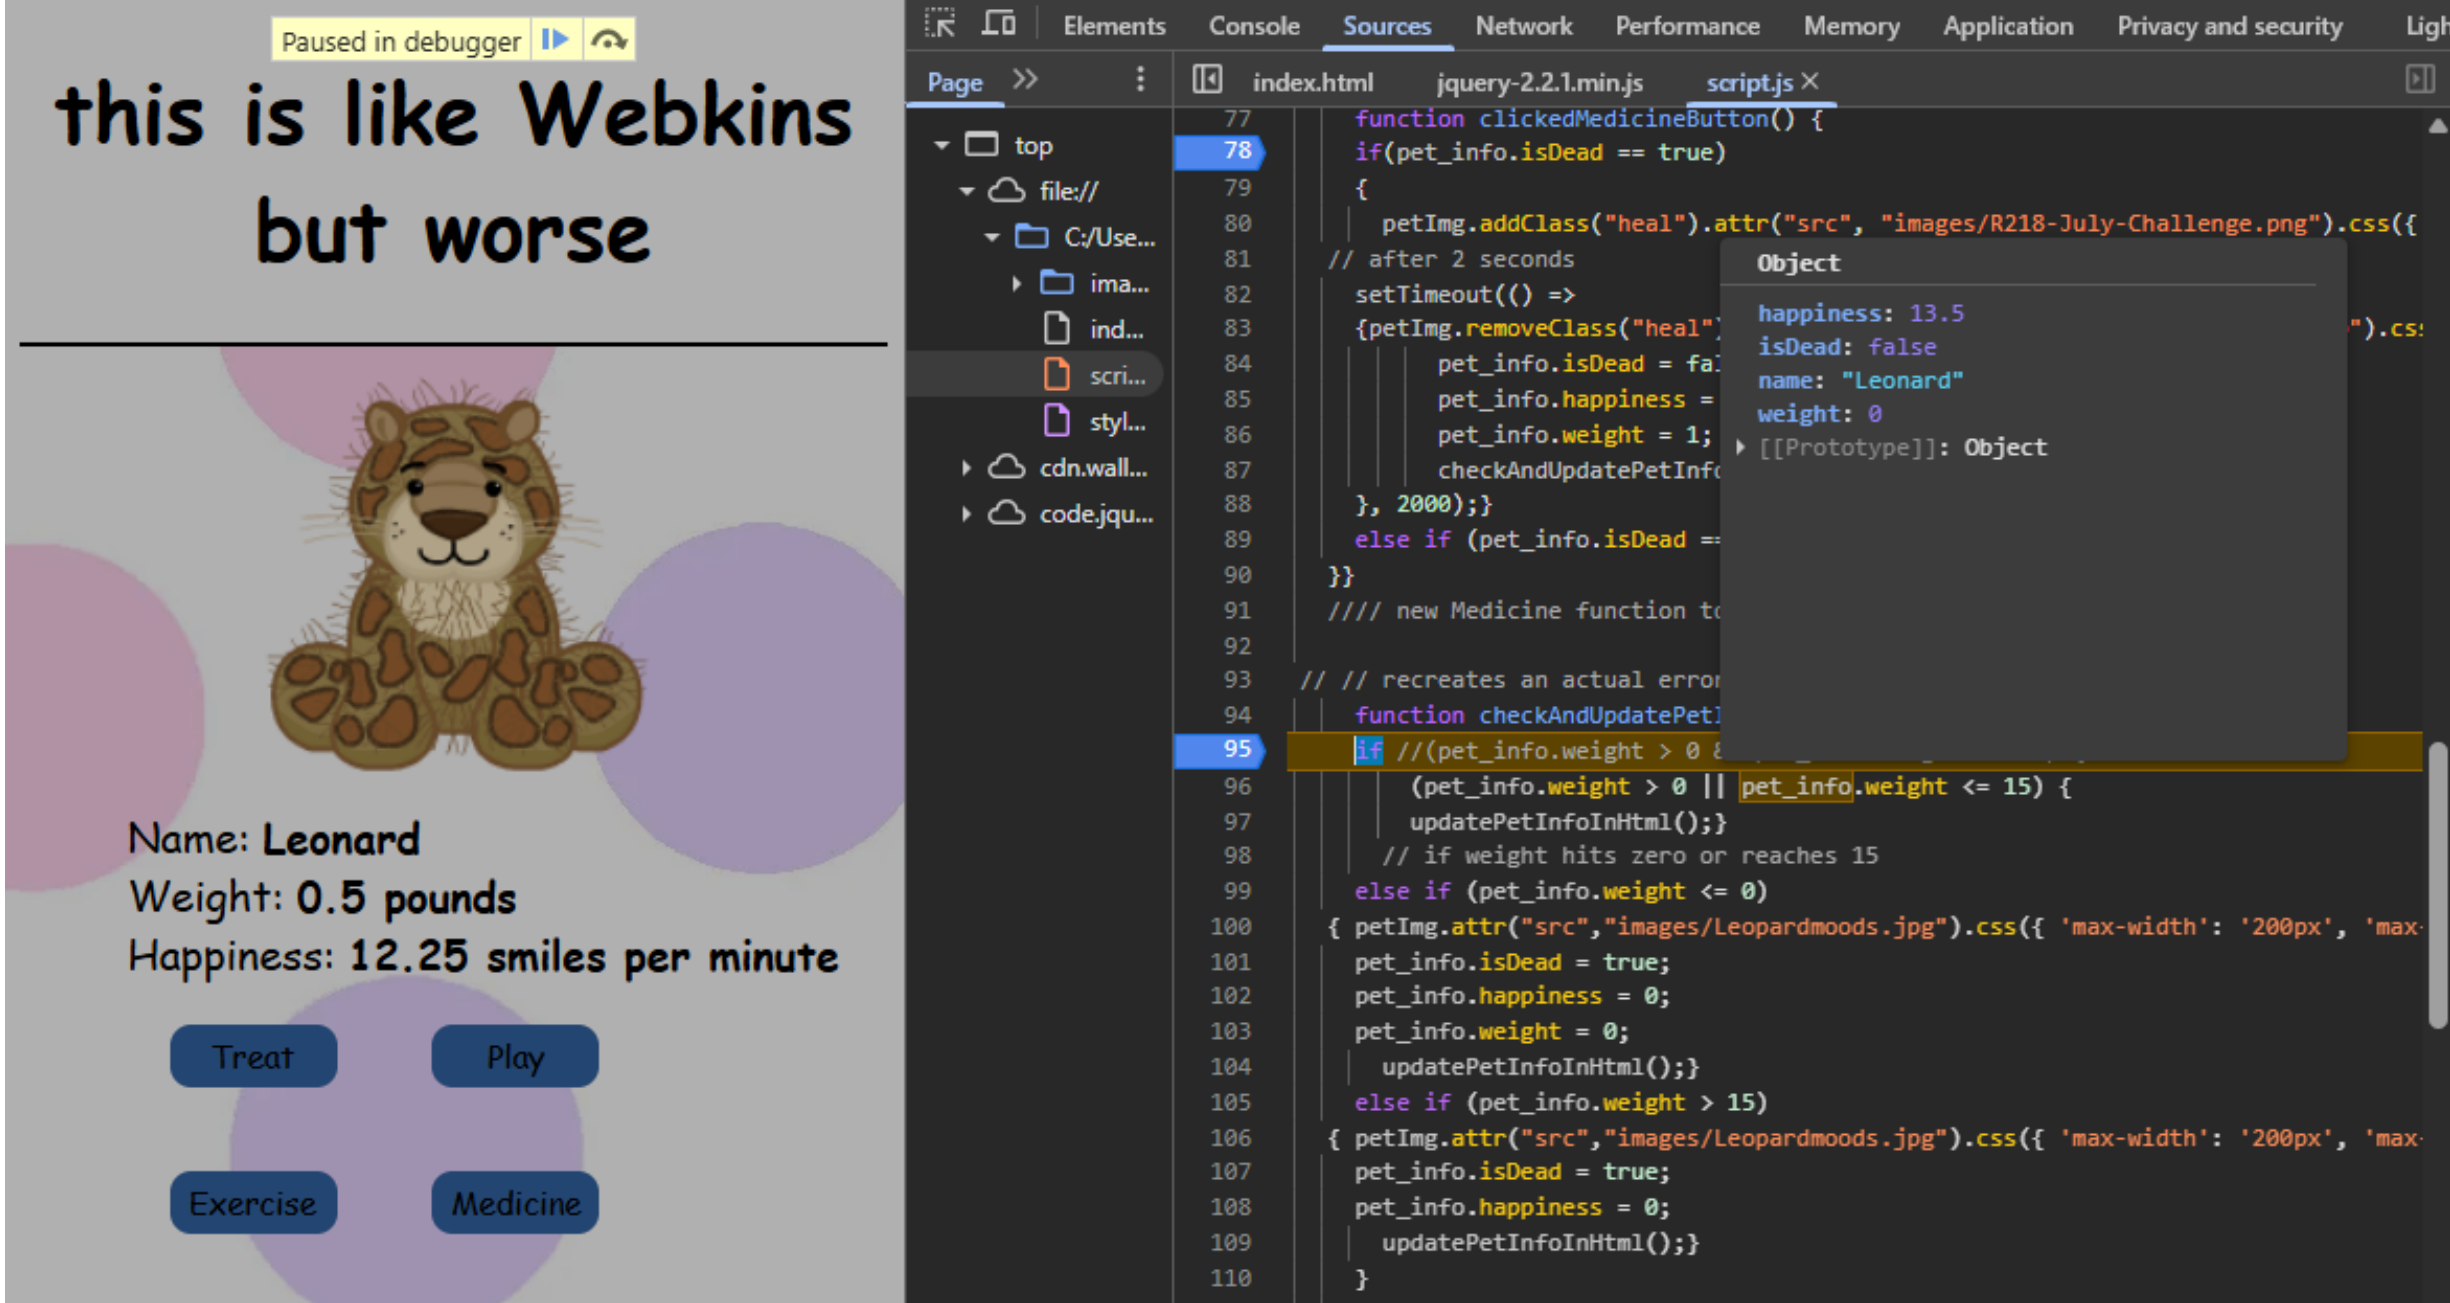

2. beginning the Play action

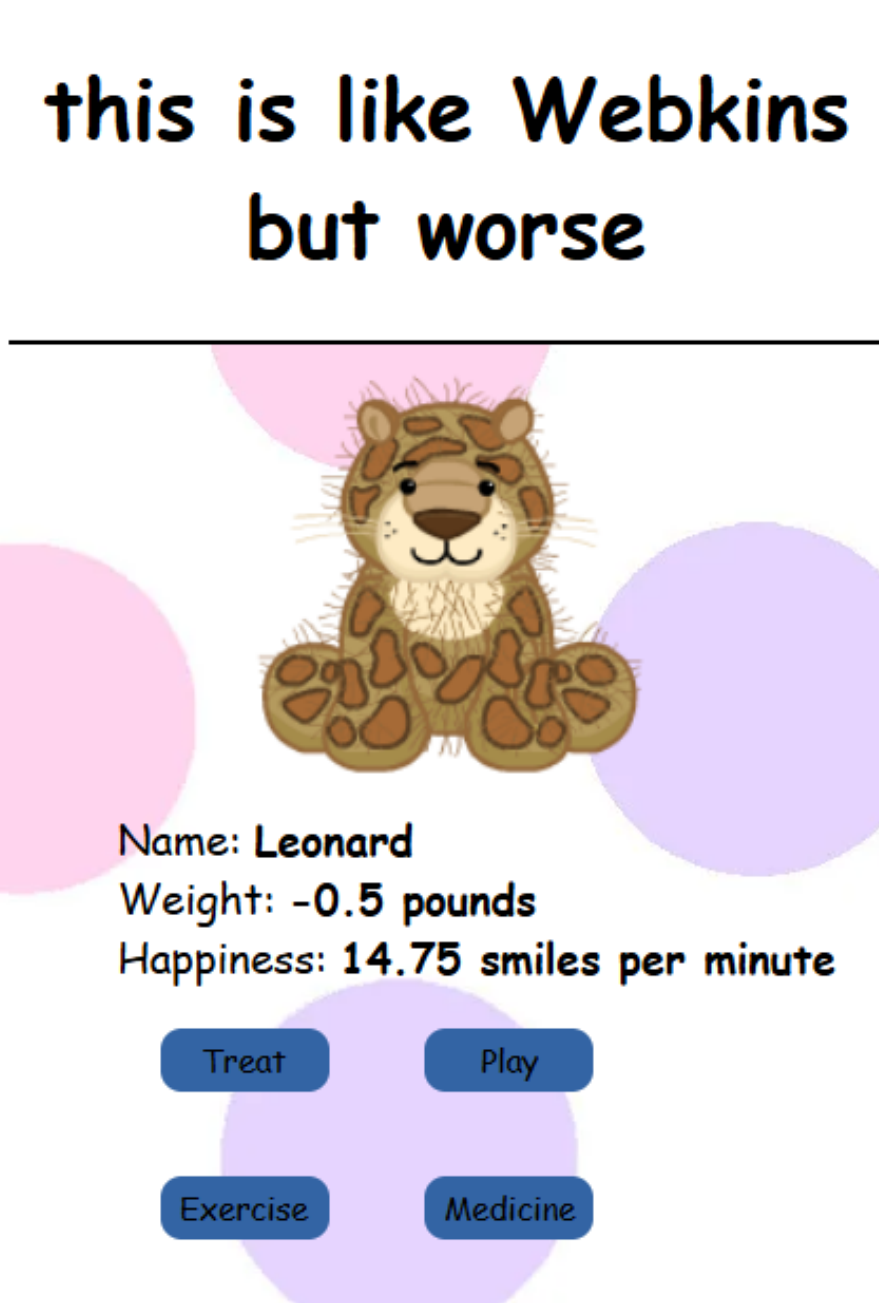

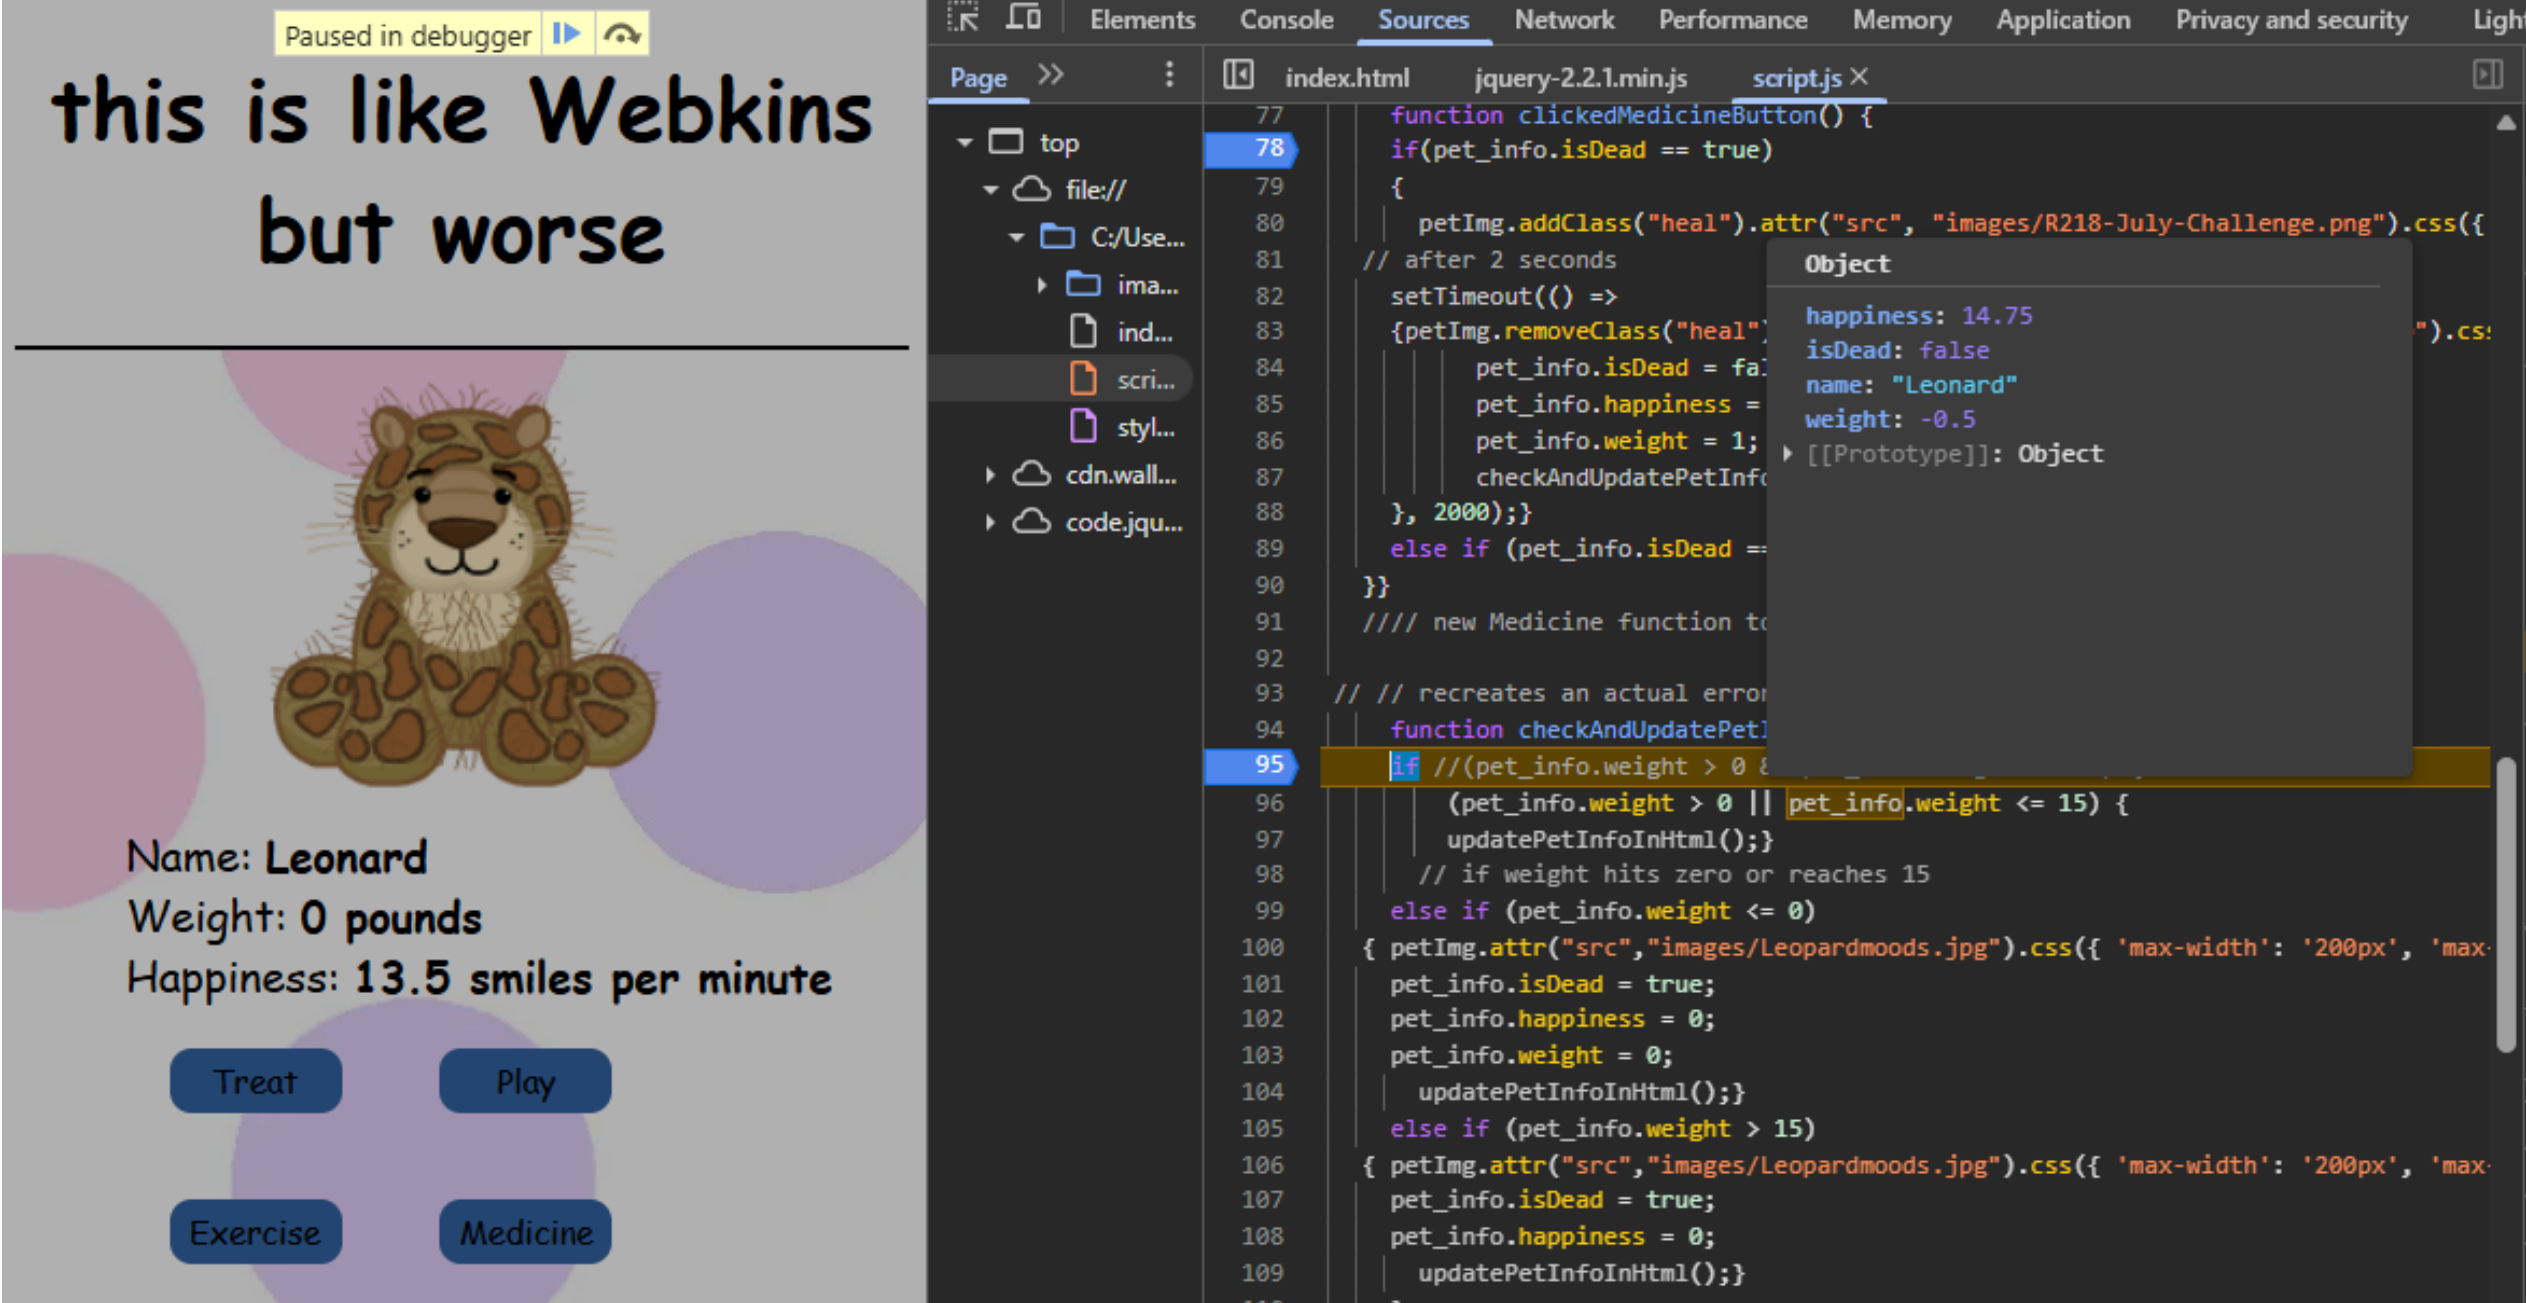

3. Leonard's info does update correctly

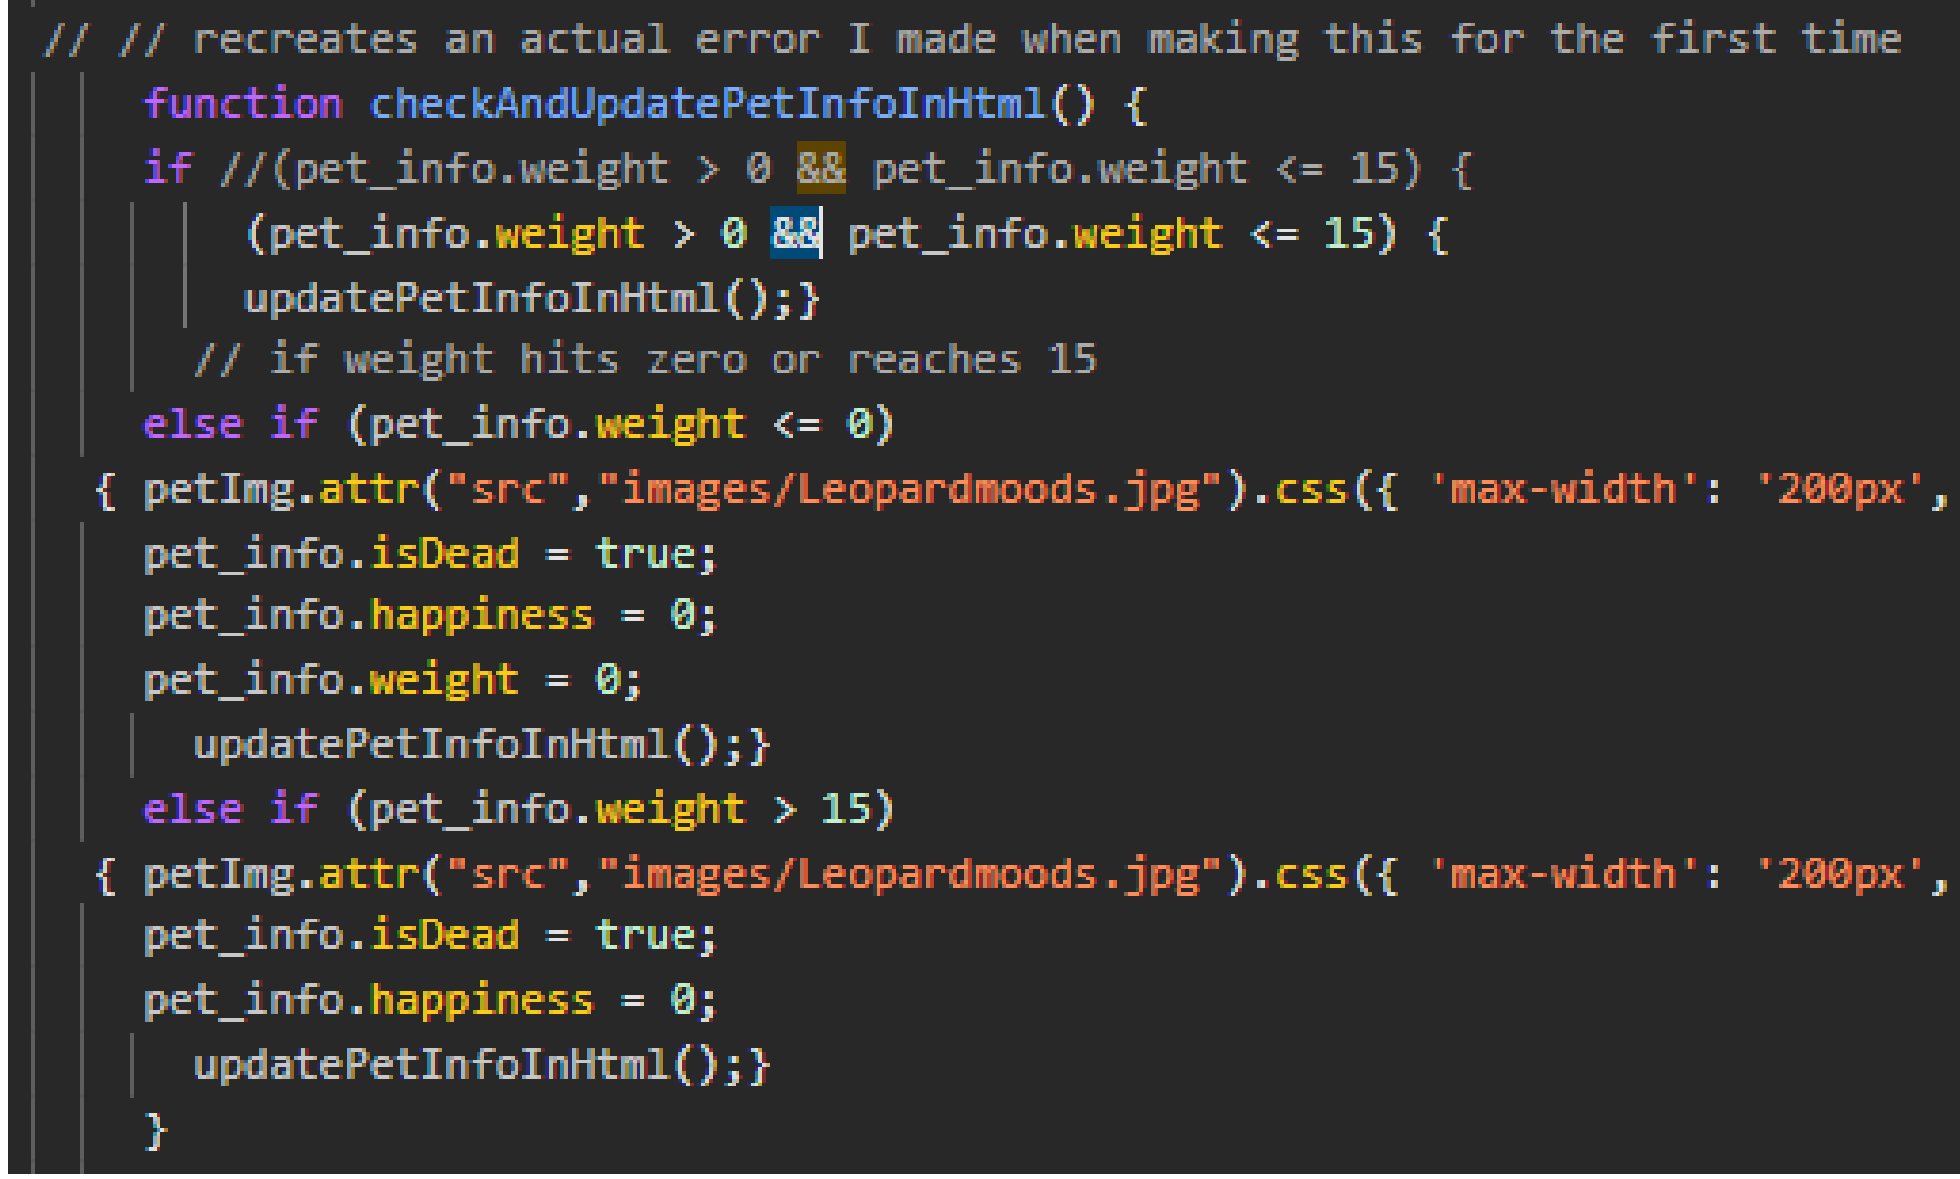

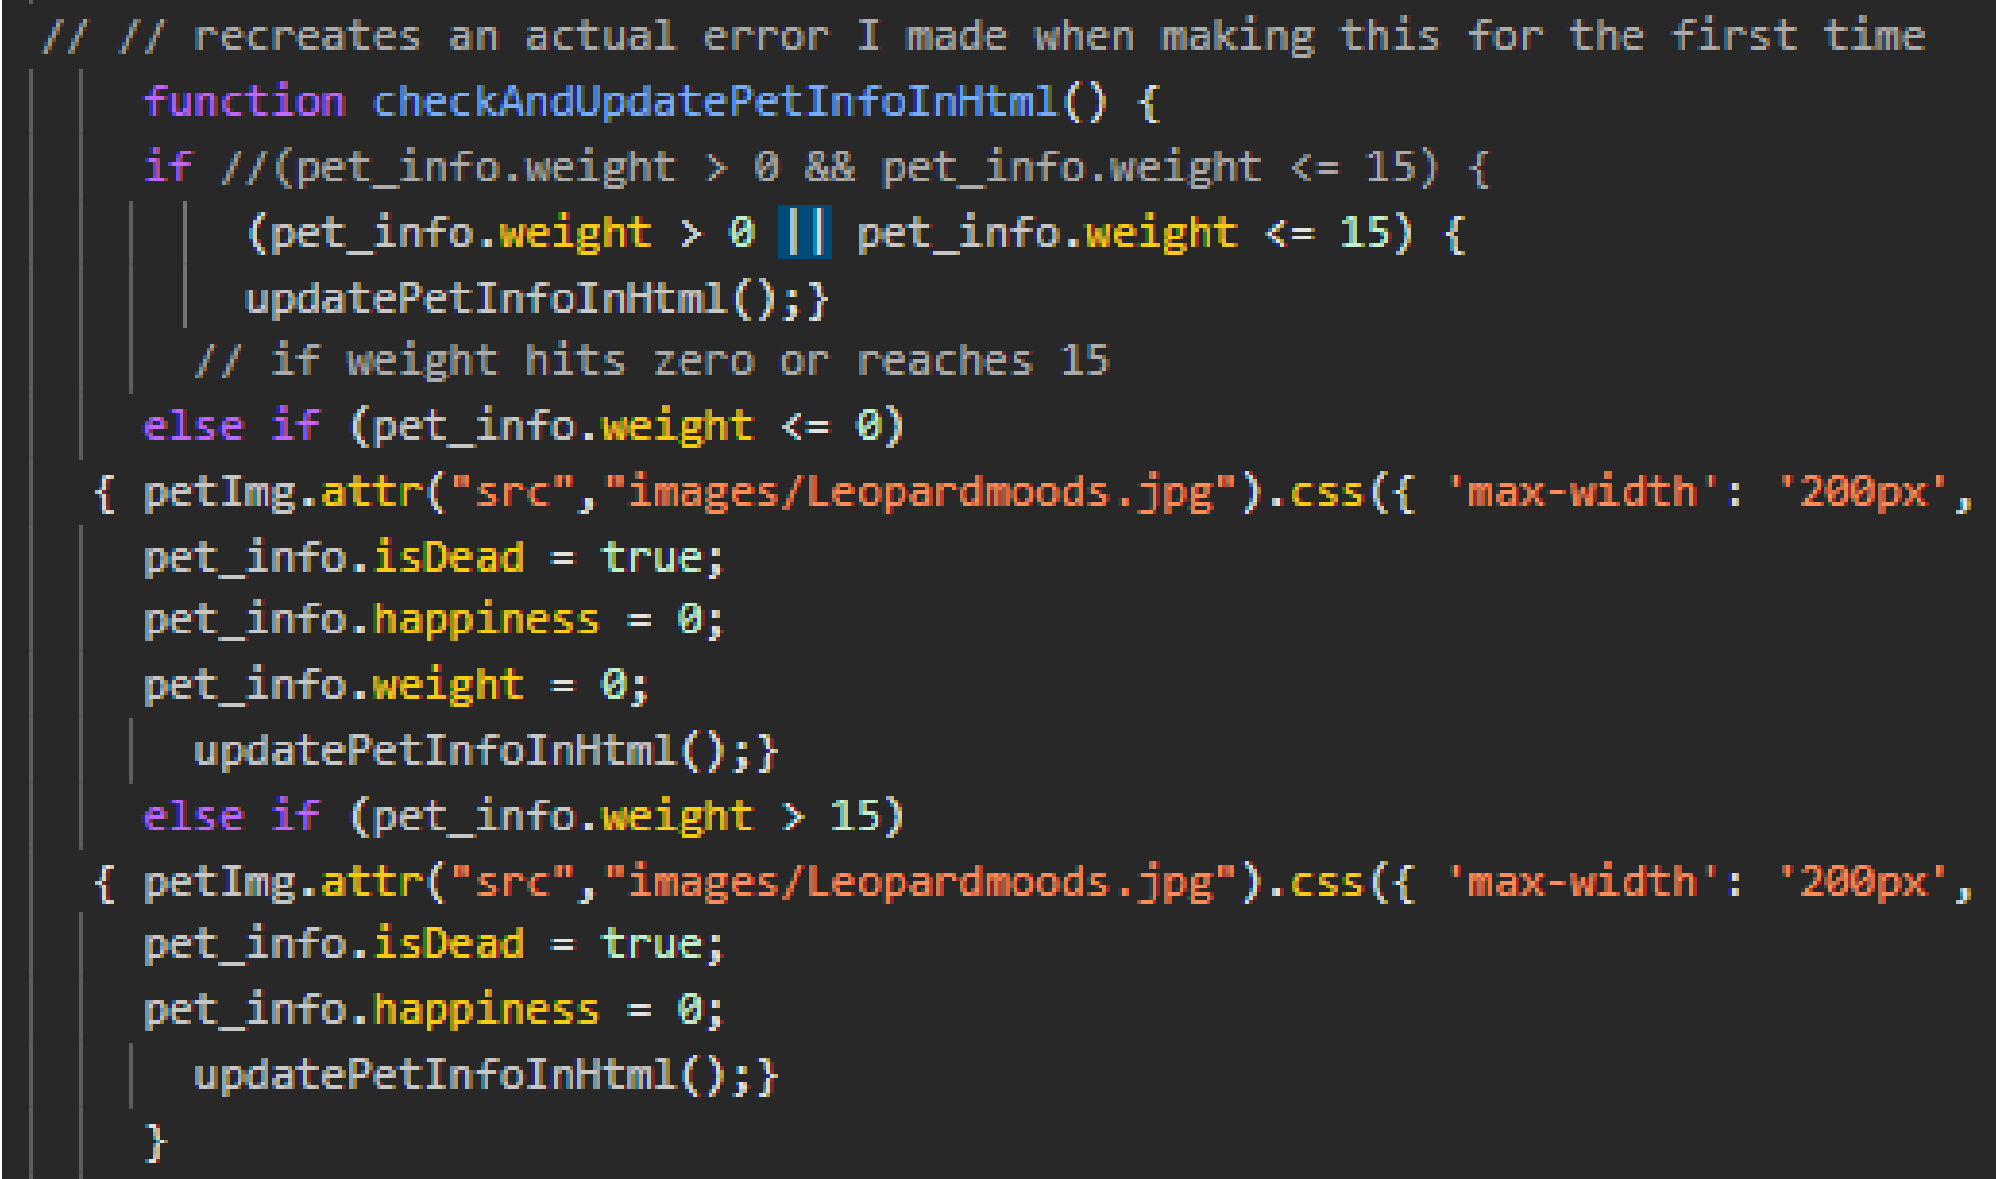

4. keep using Play until Weight is about to hit 0

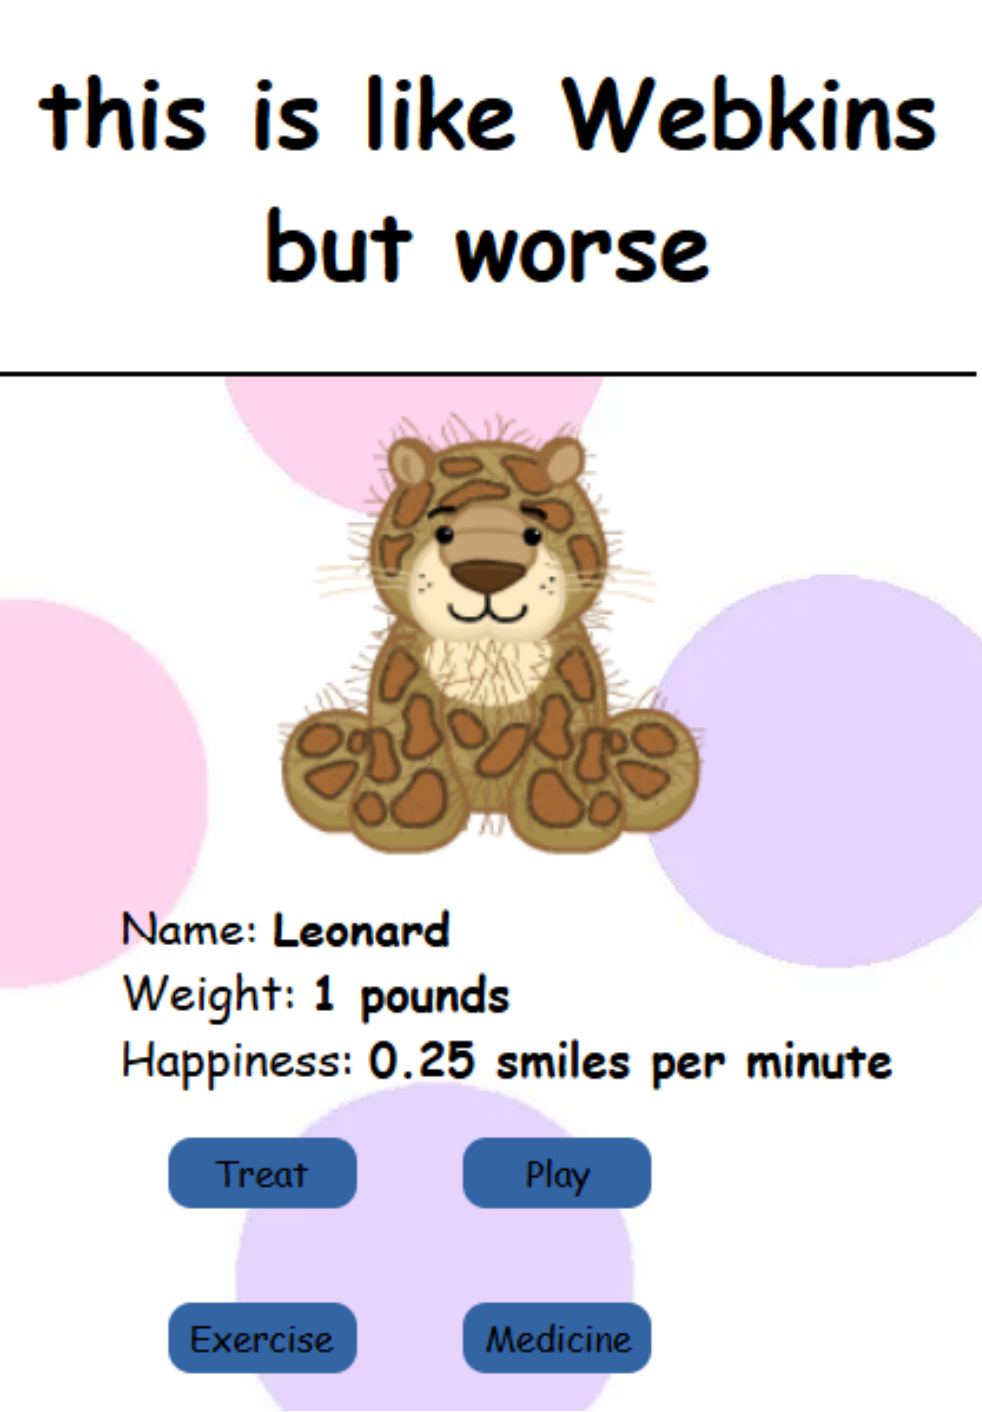

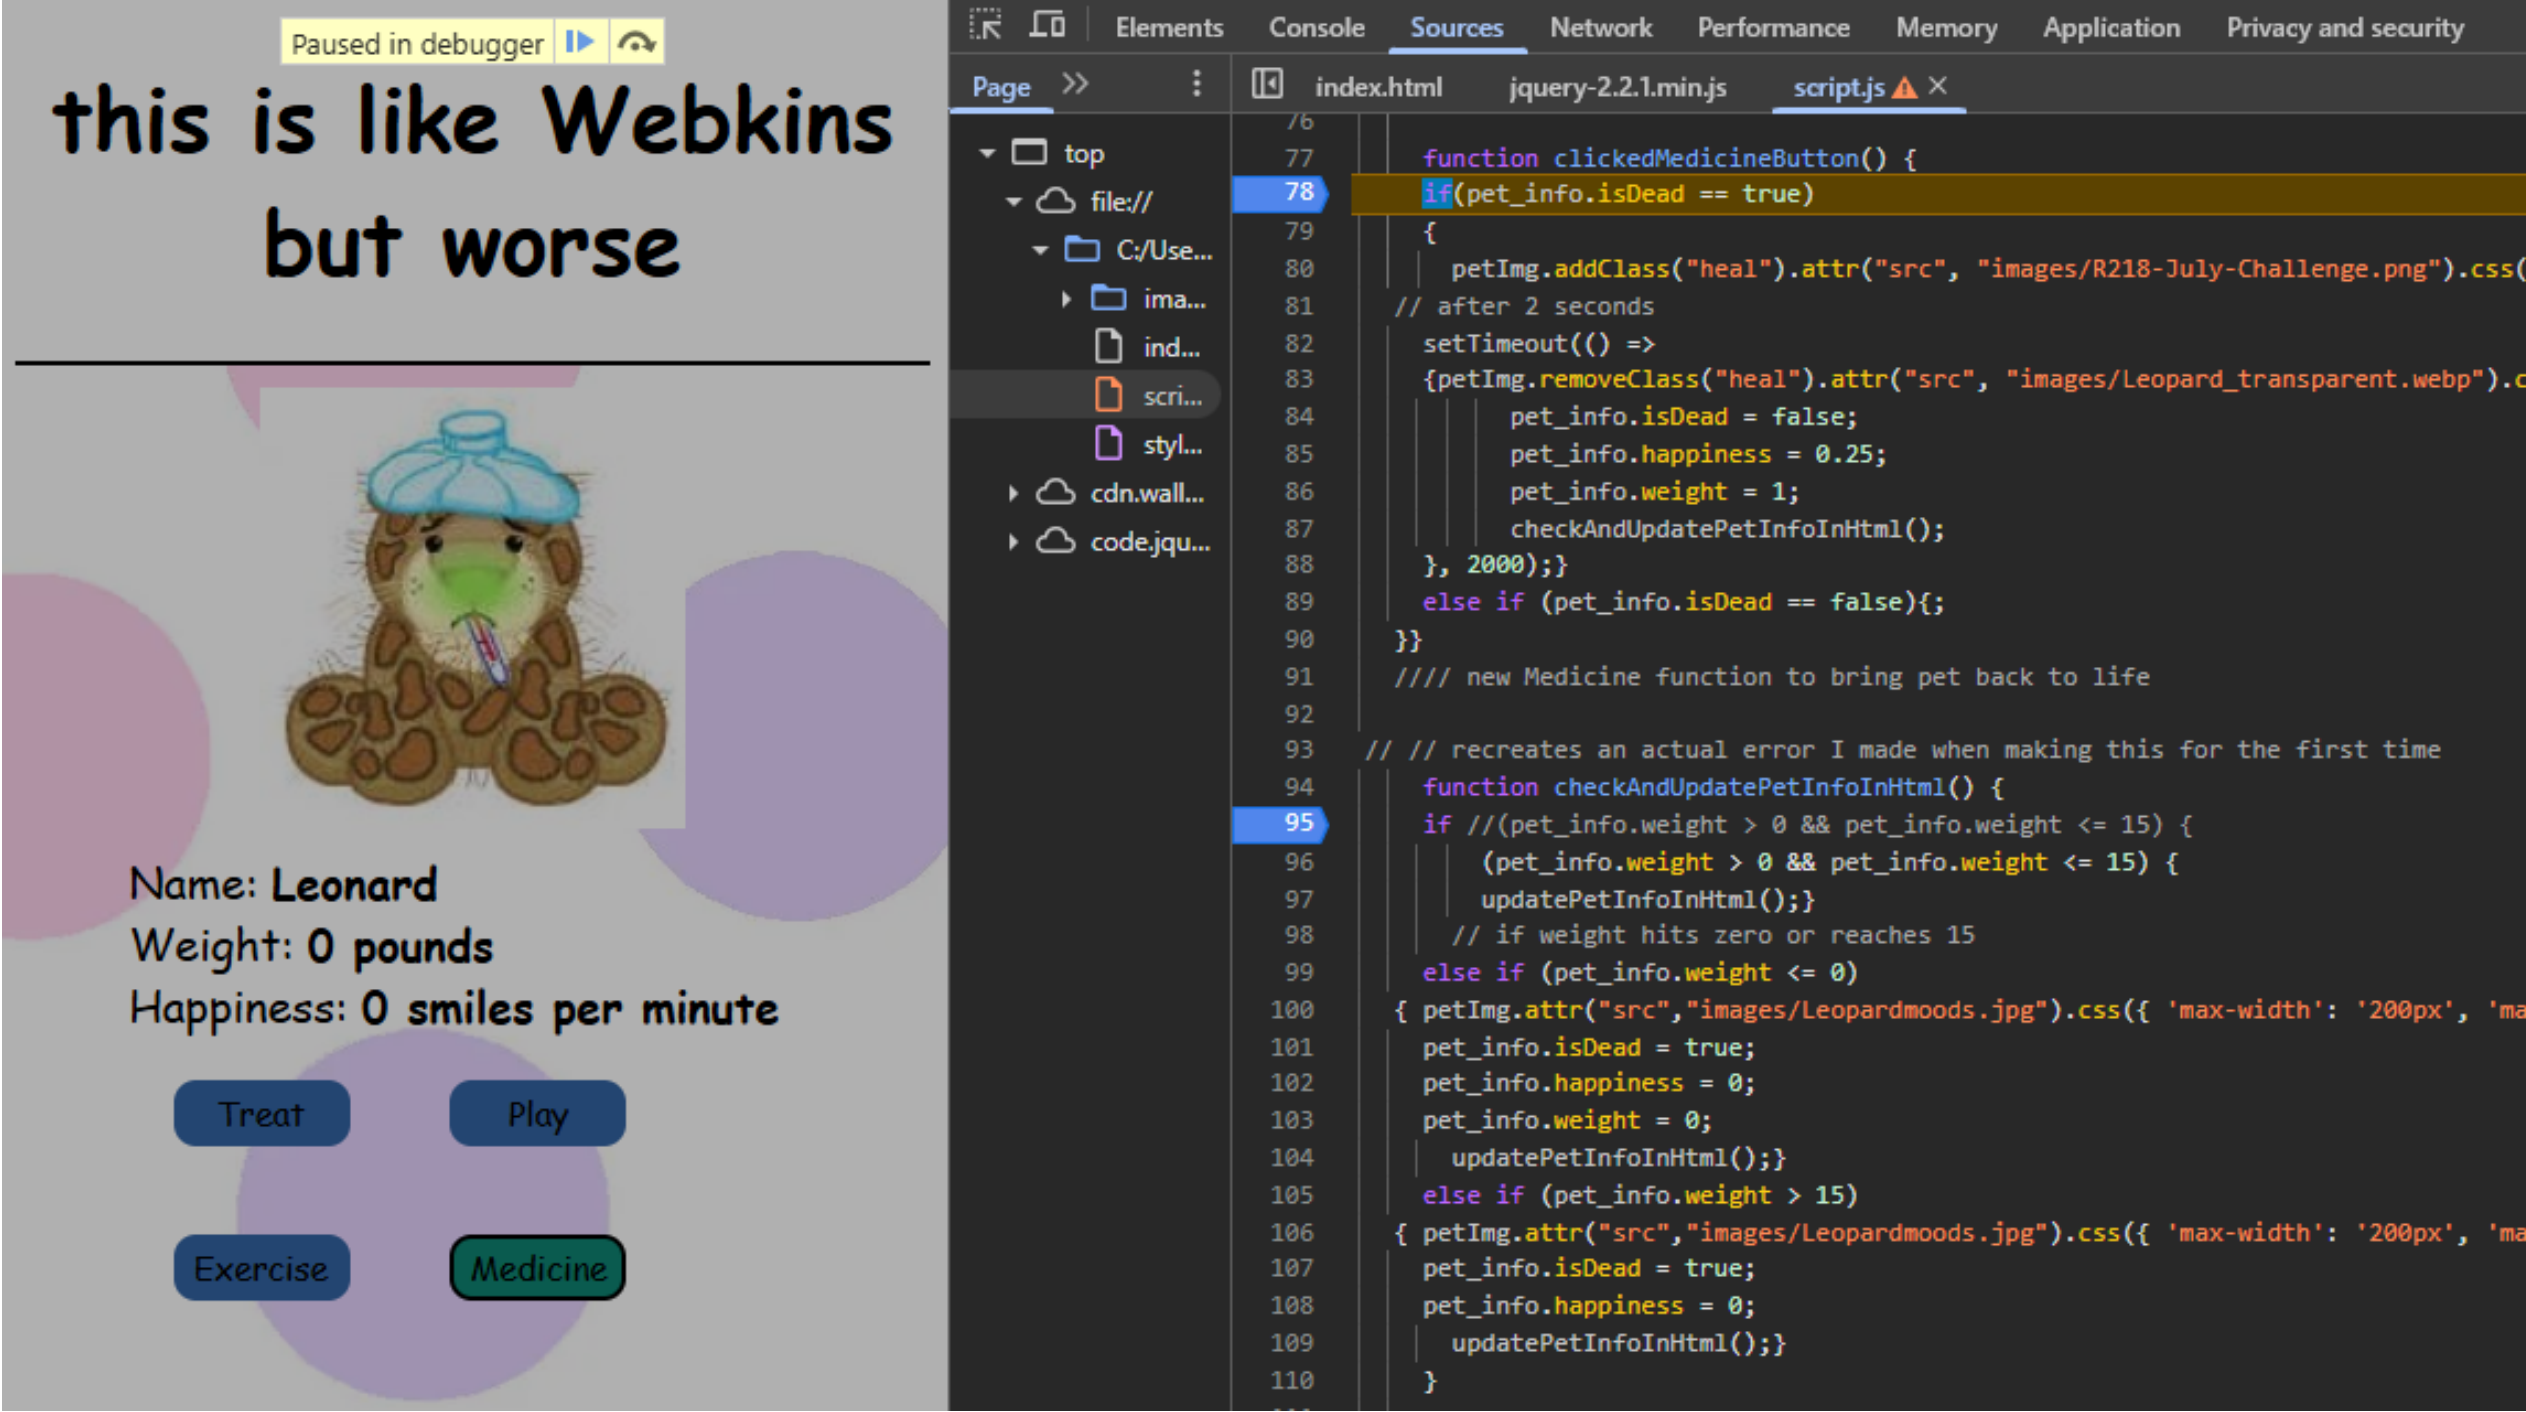

5. this is not the expected result, Leonard's isDead attribute should have updated to True

6. the problem lies in the if statement of checkAndUpdatePetInfoInHtml, I will simply swap || for &&

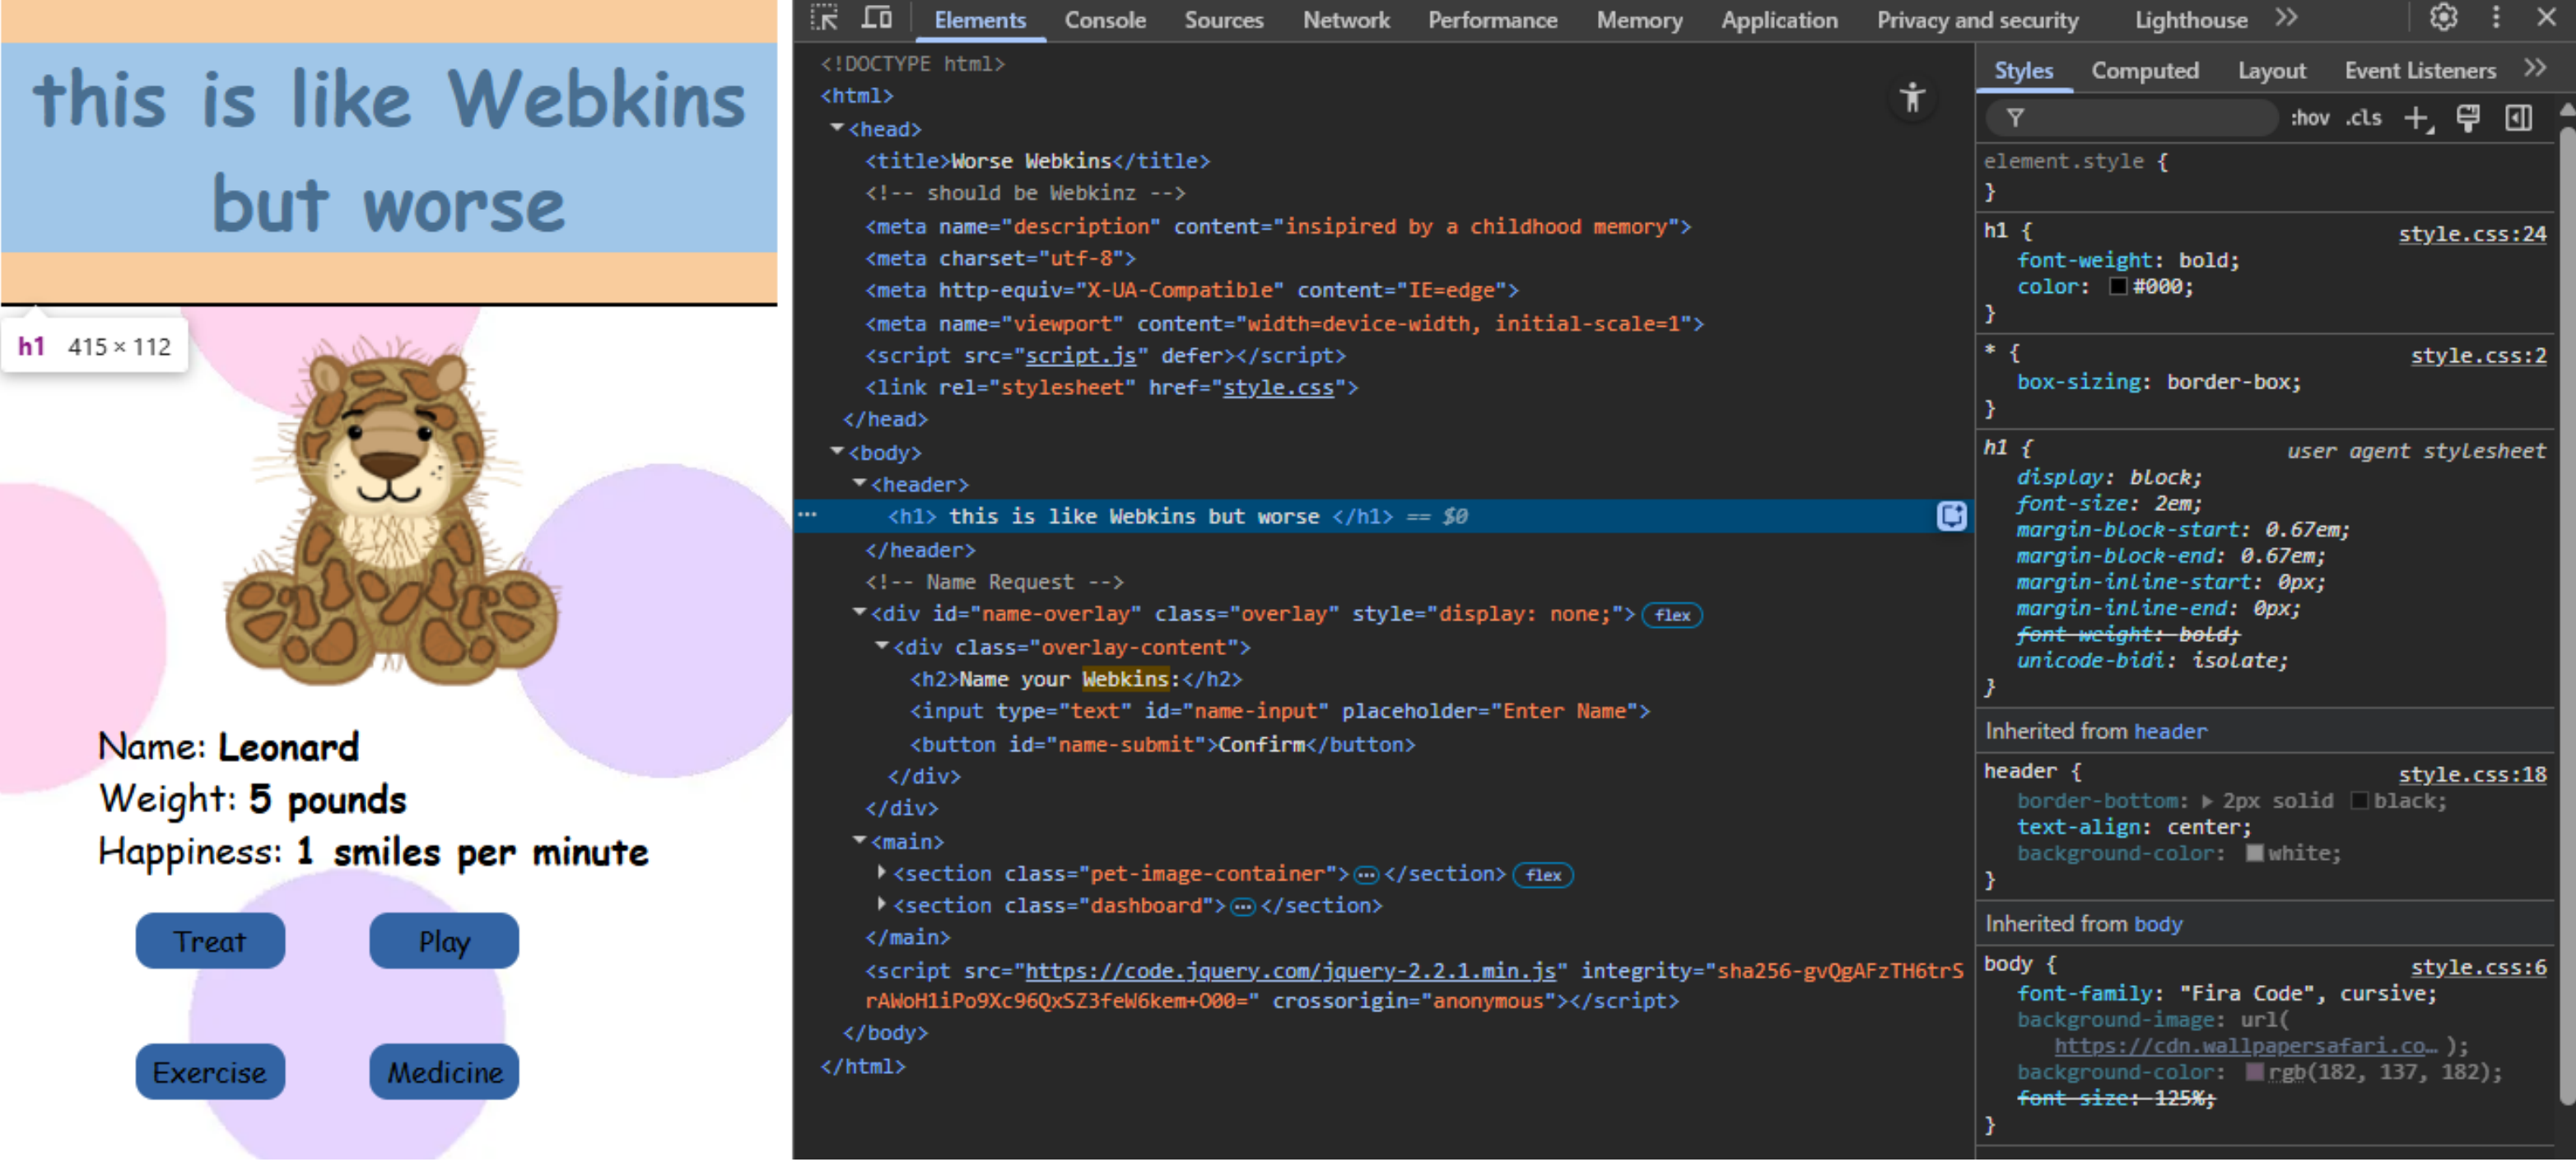

7. now Leonard properly gets sick and the Medicine button will save him

comp484-hw10-ramey

DOM nodes

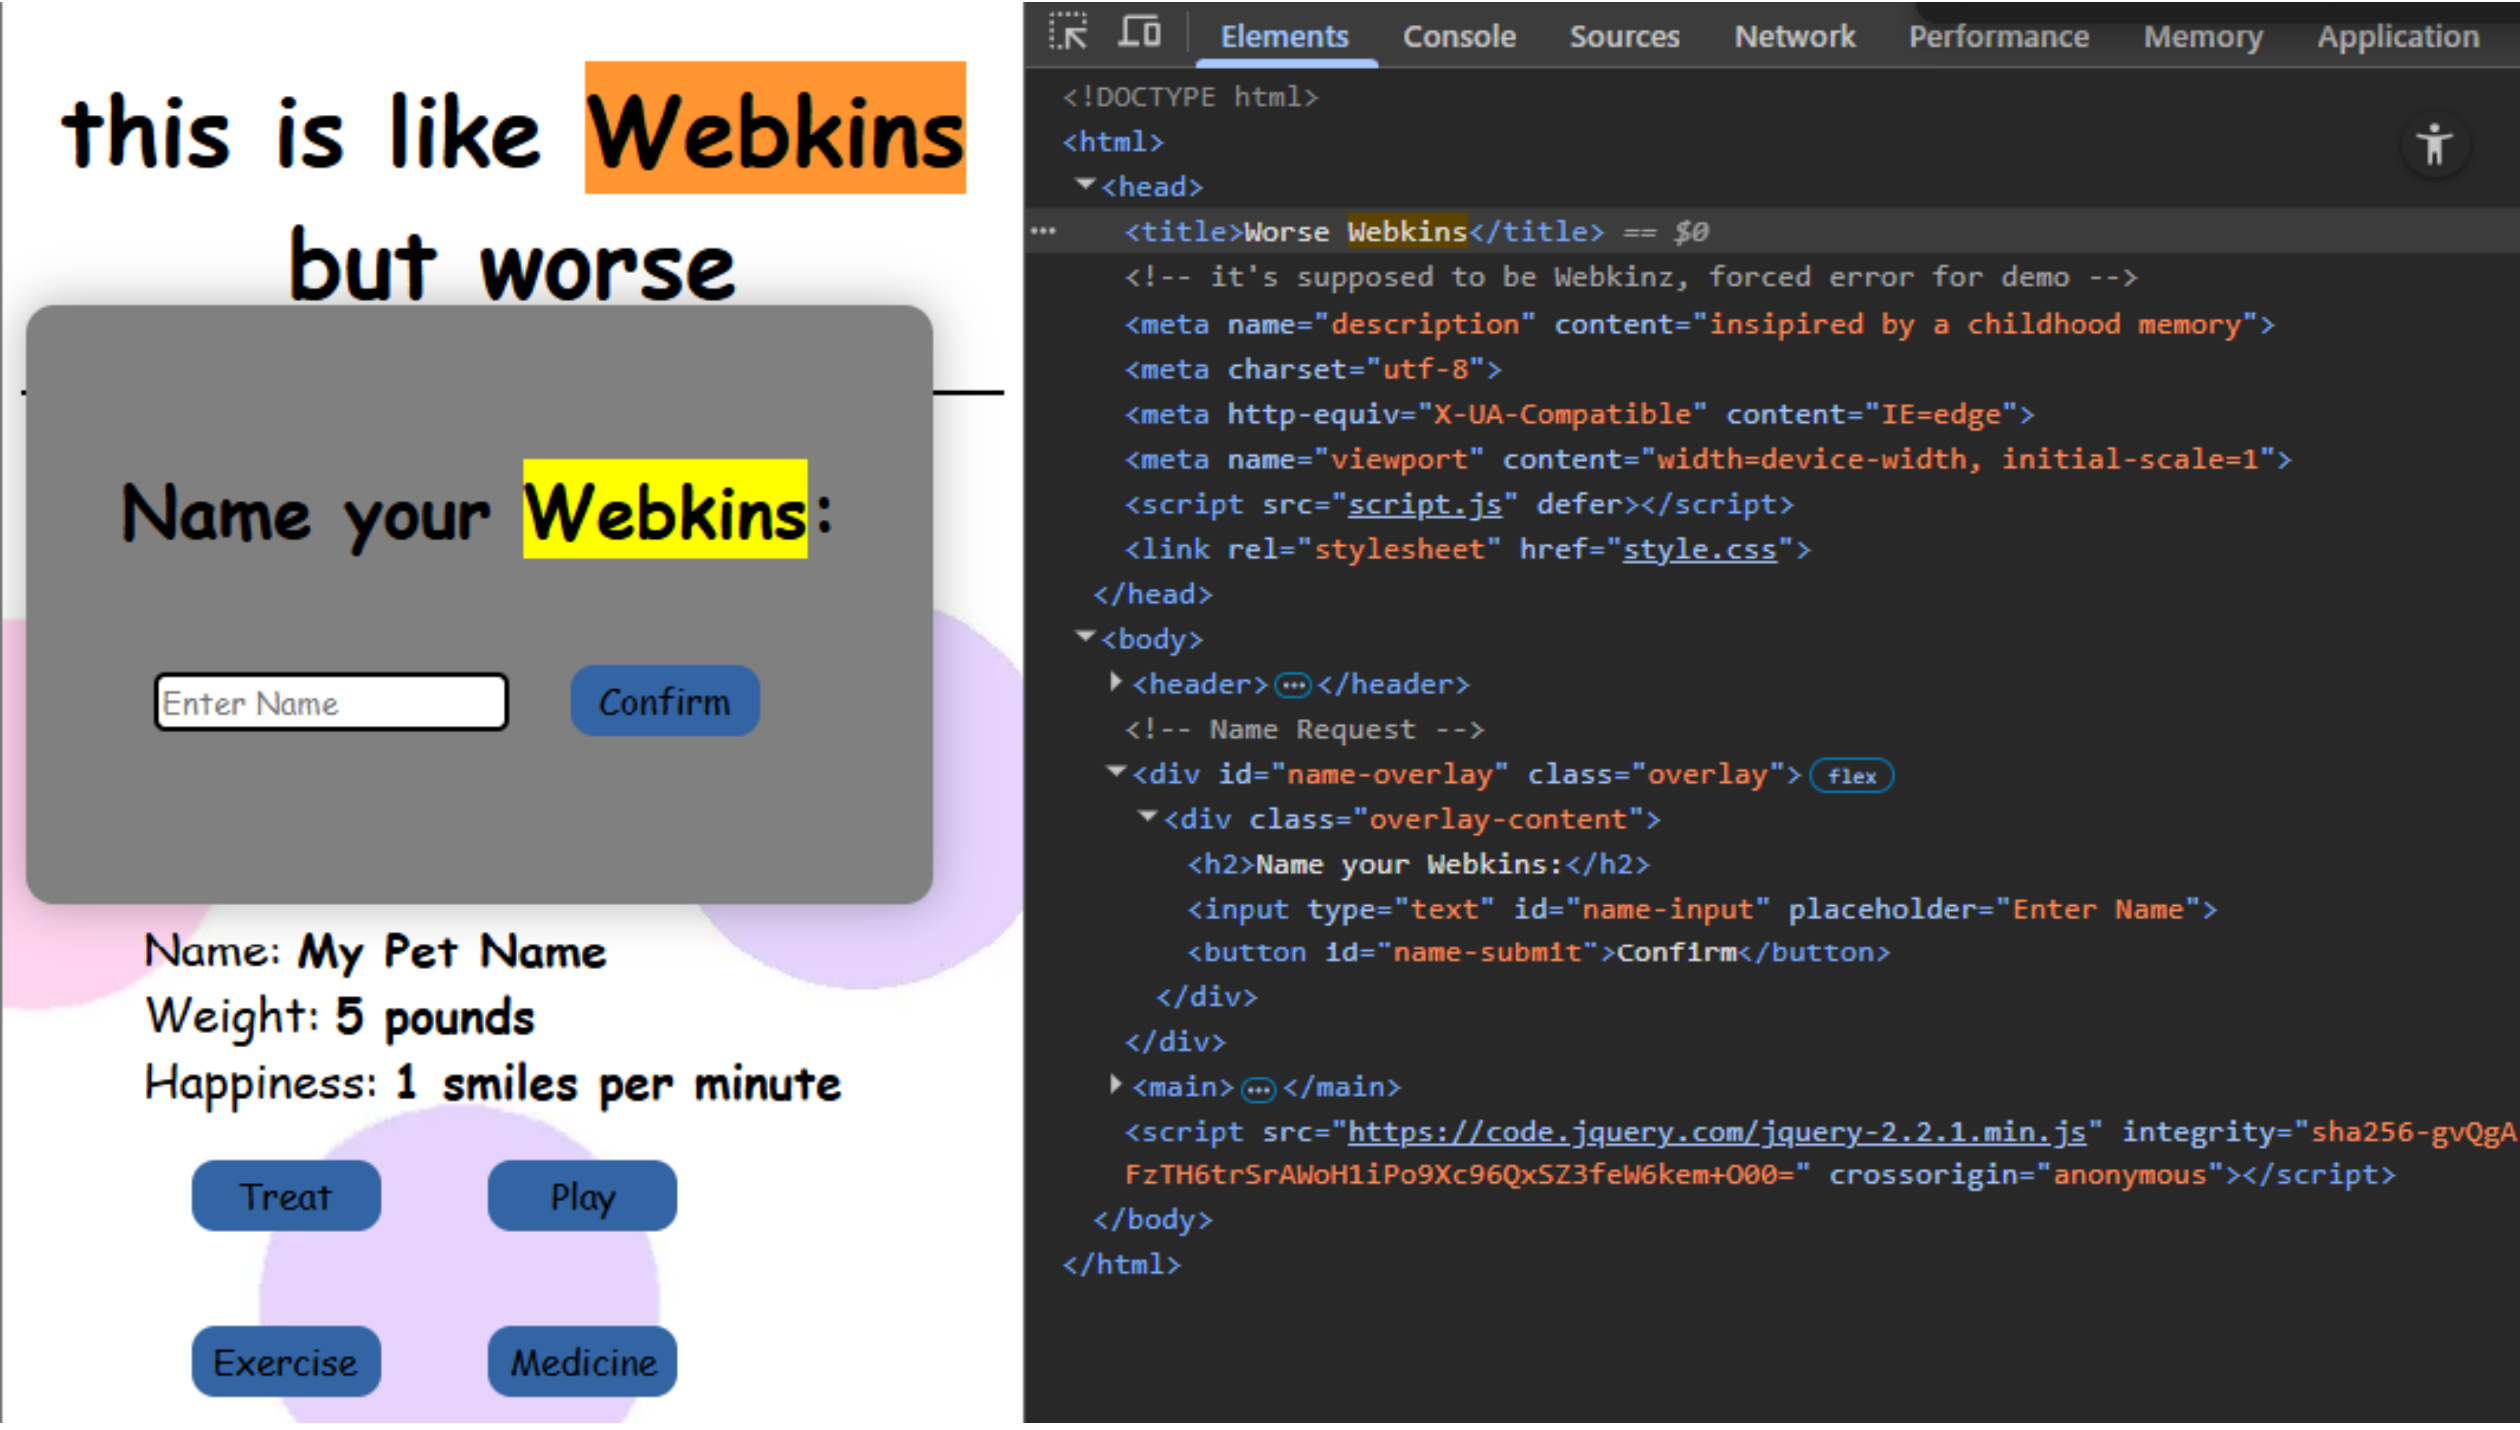

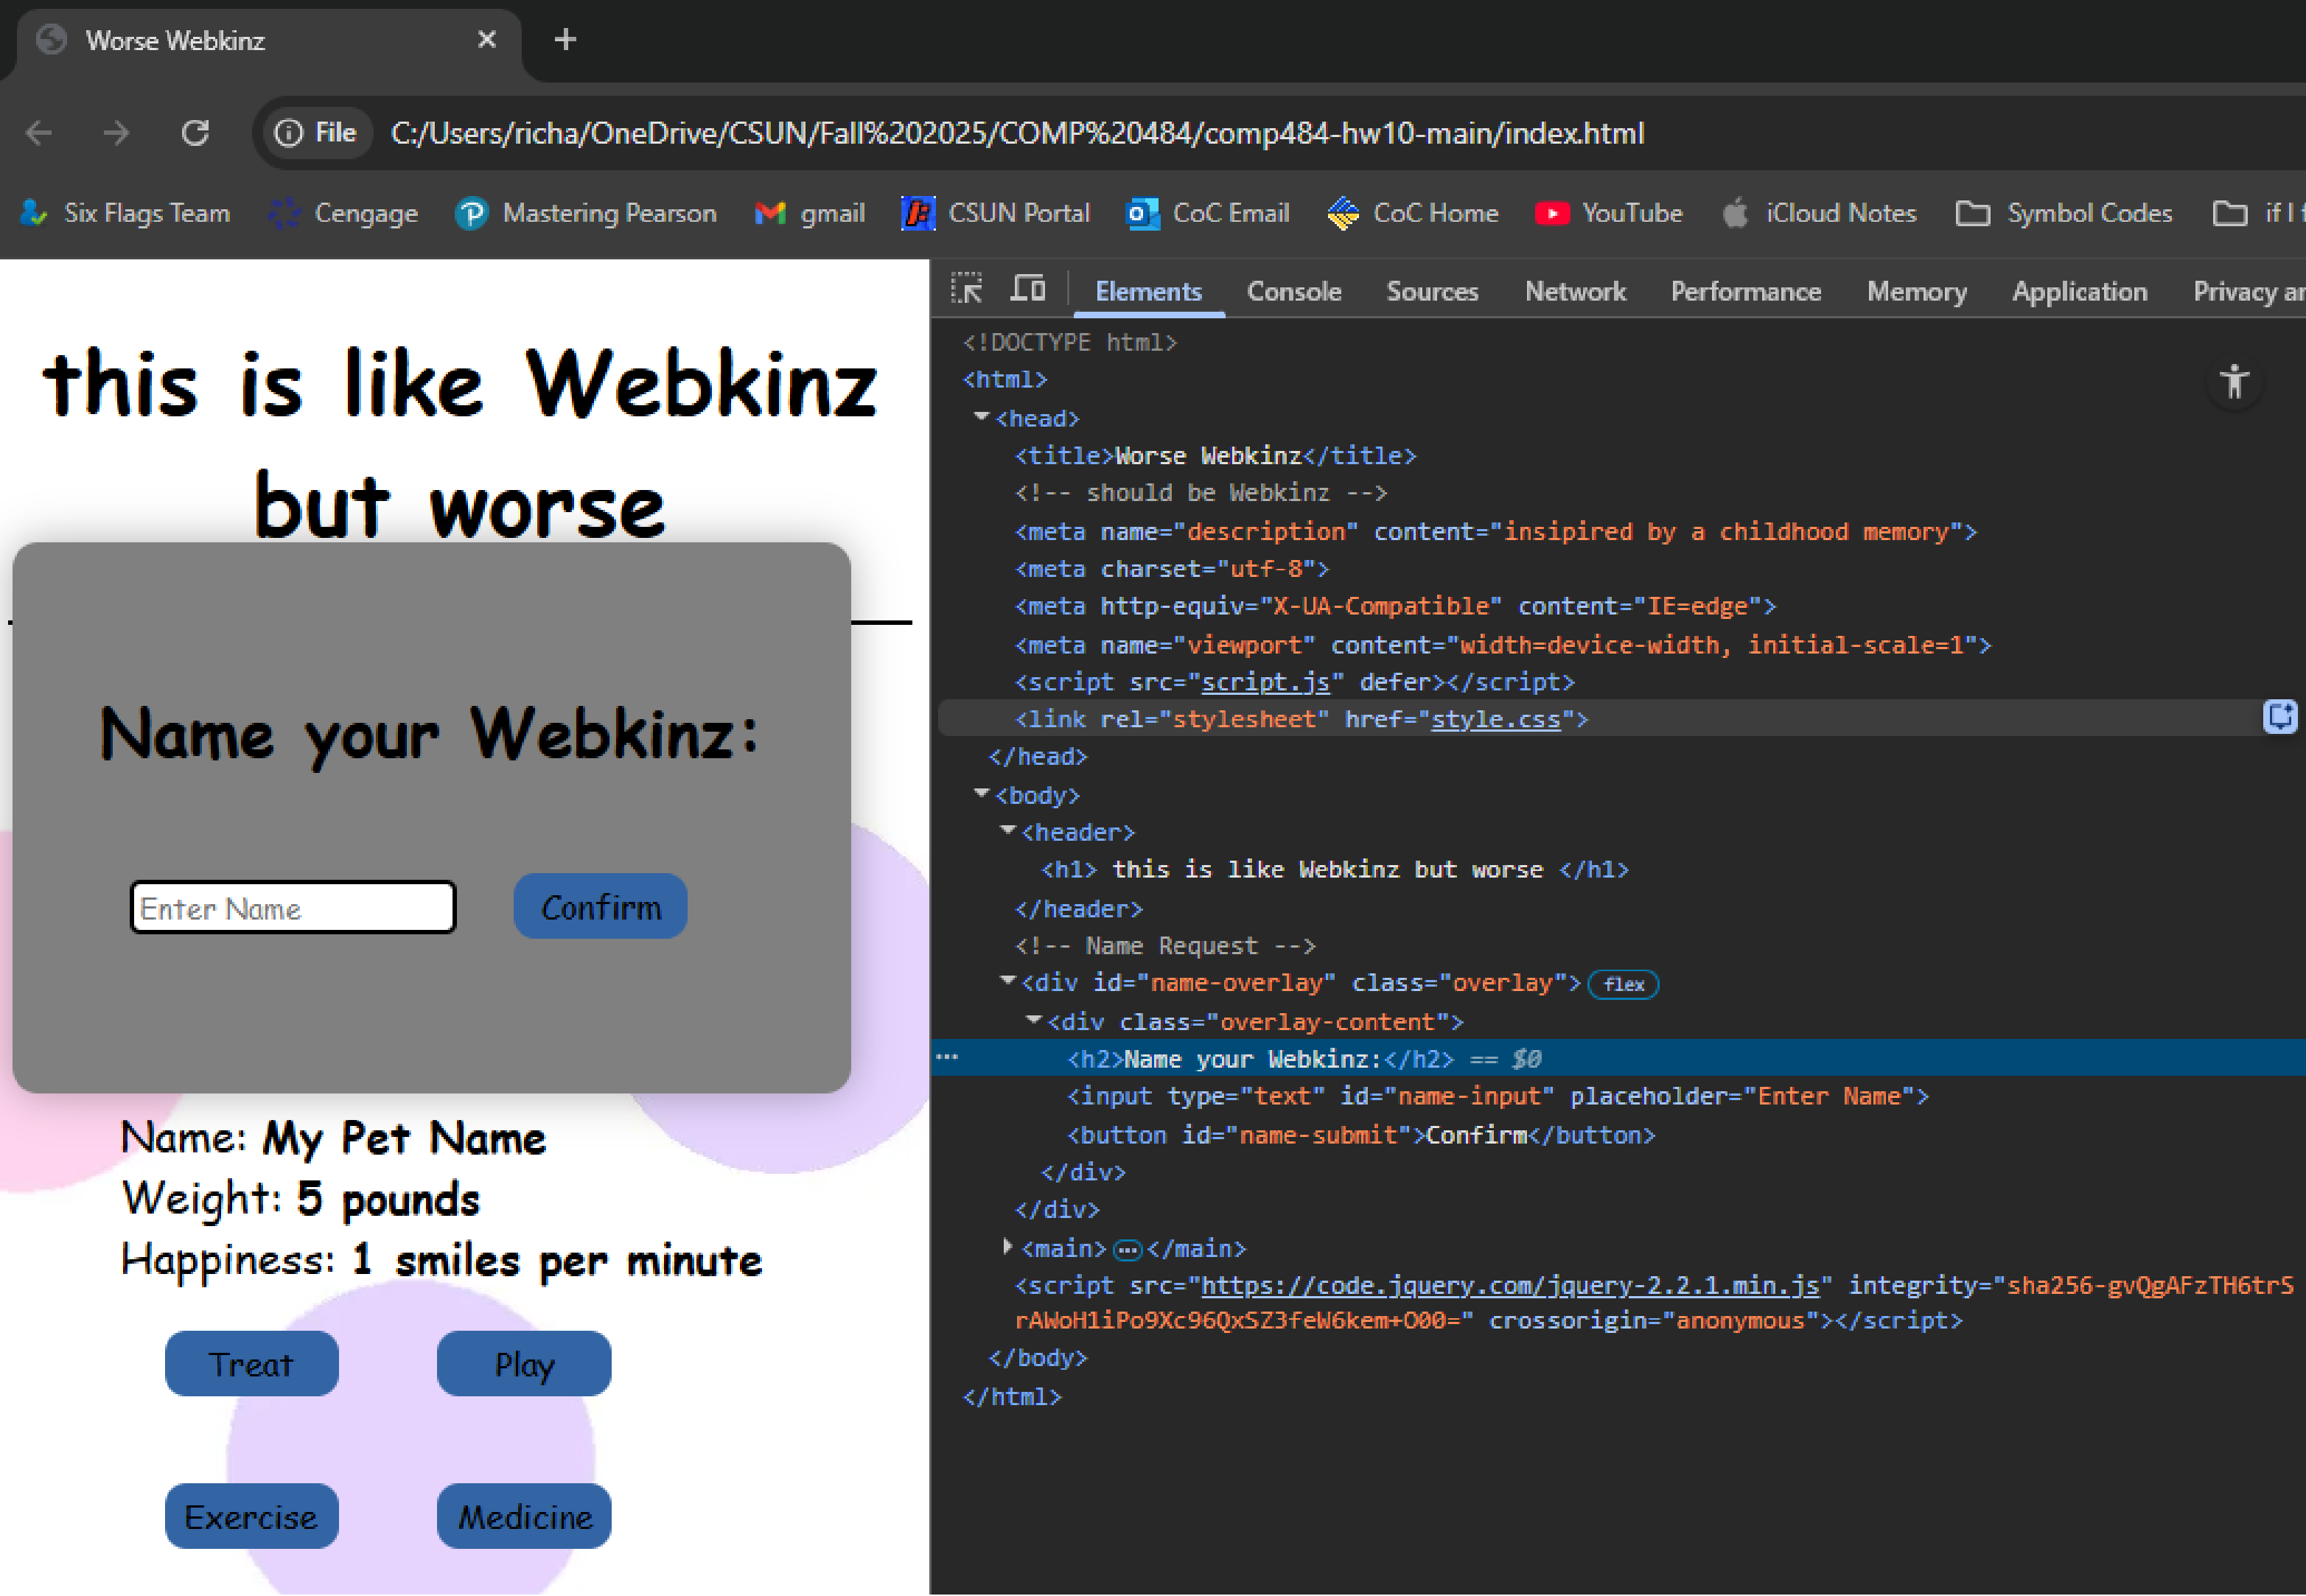

1. inspecting the header element

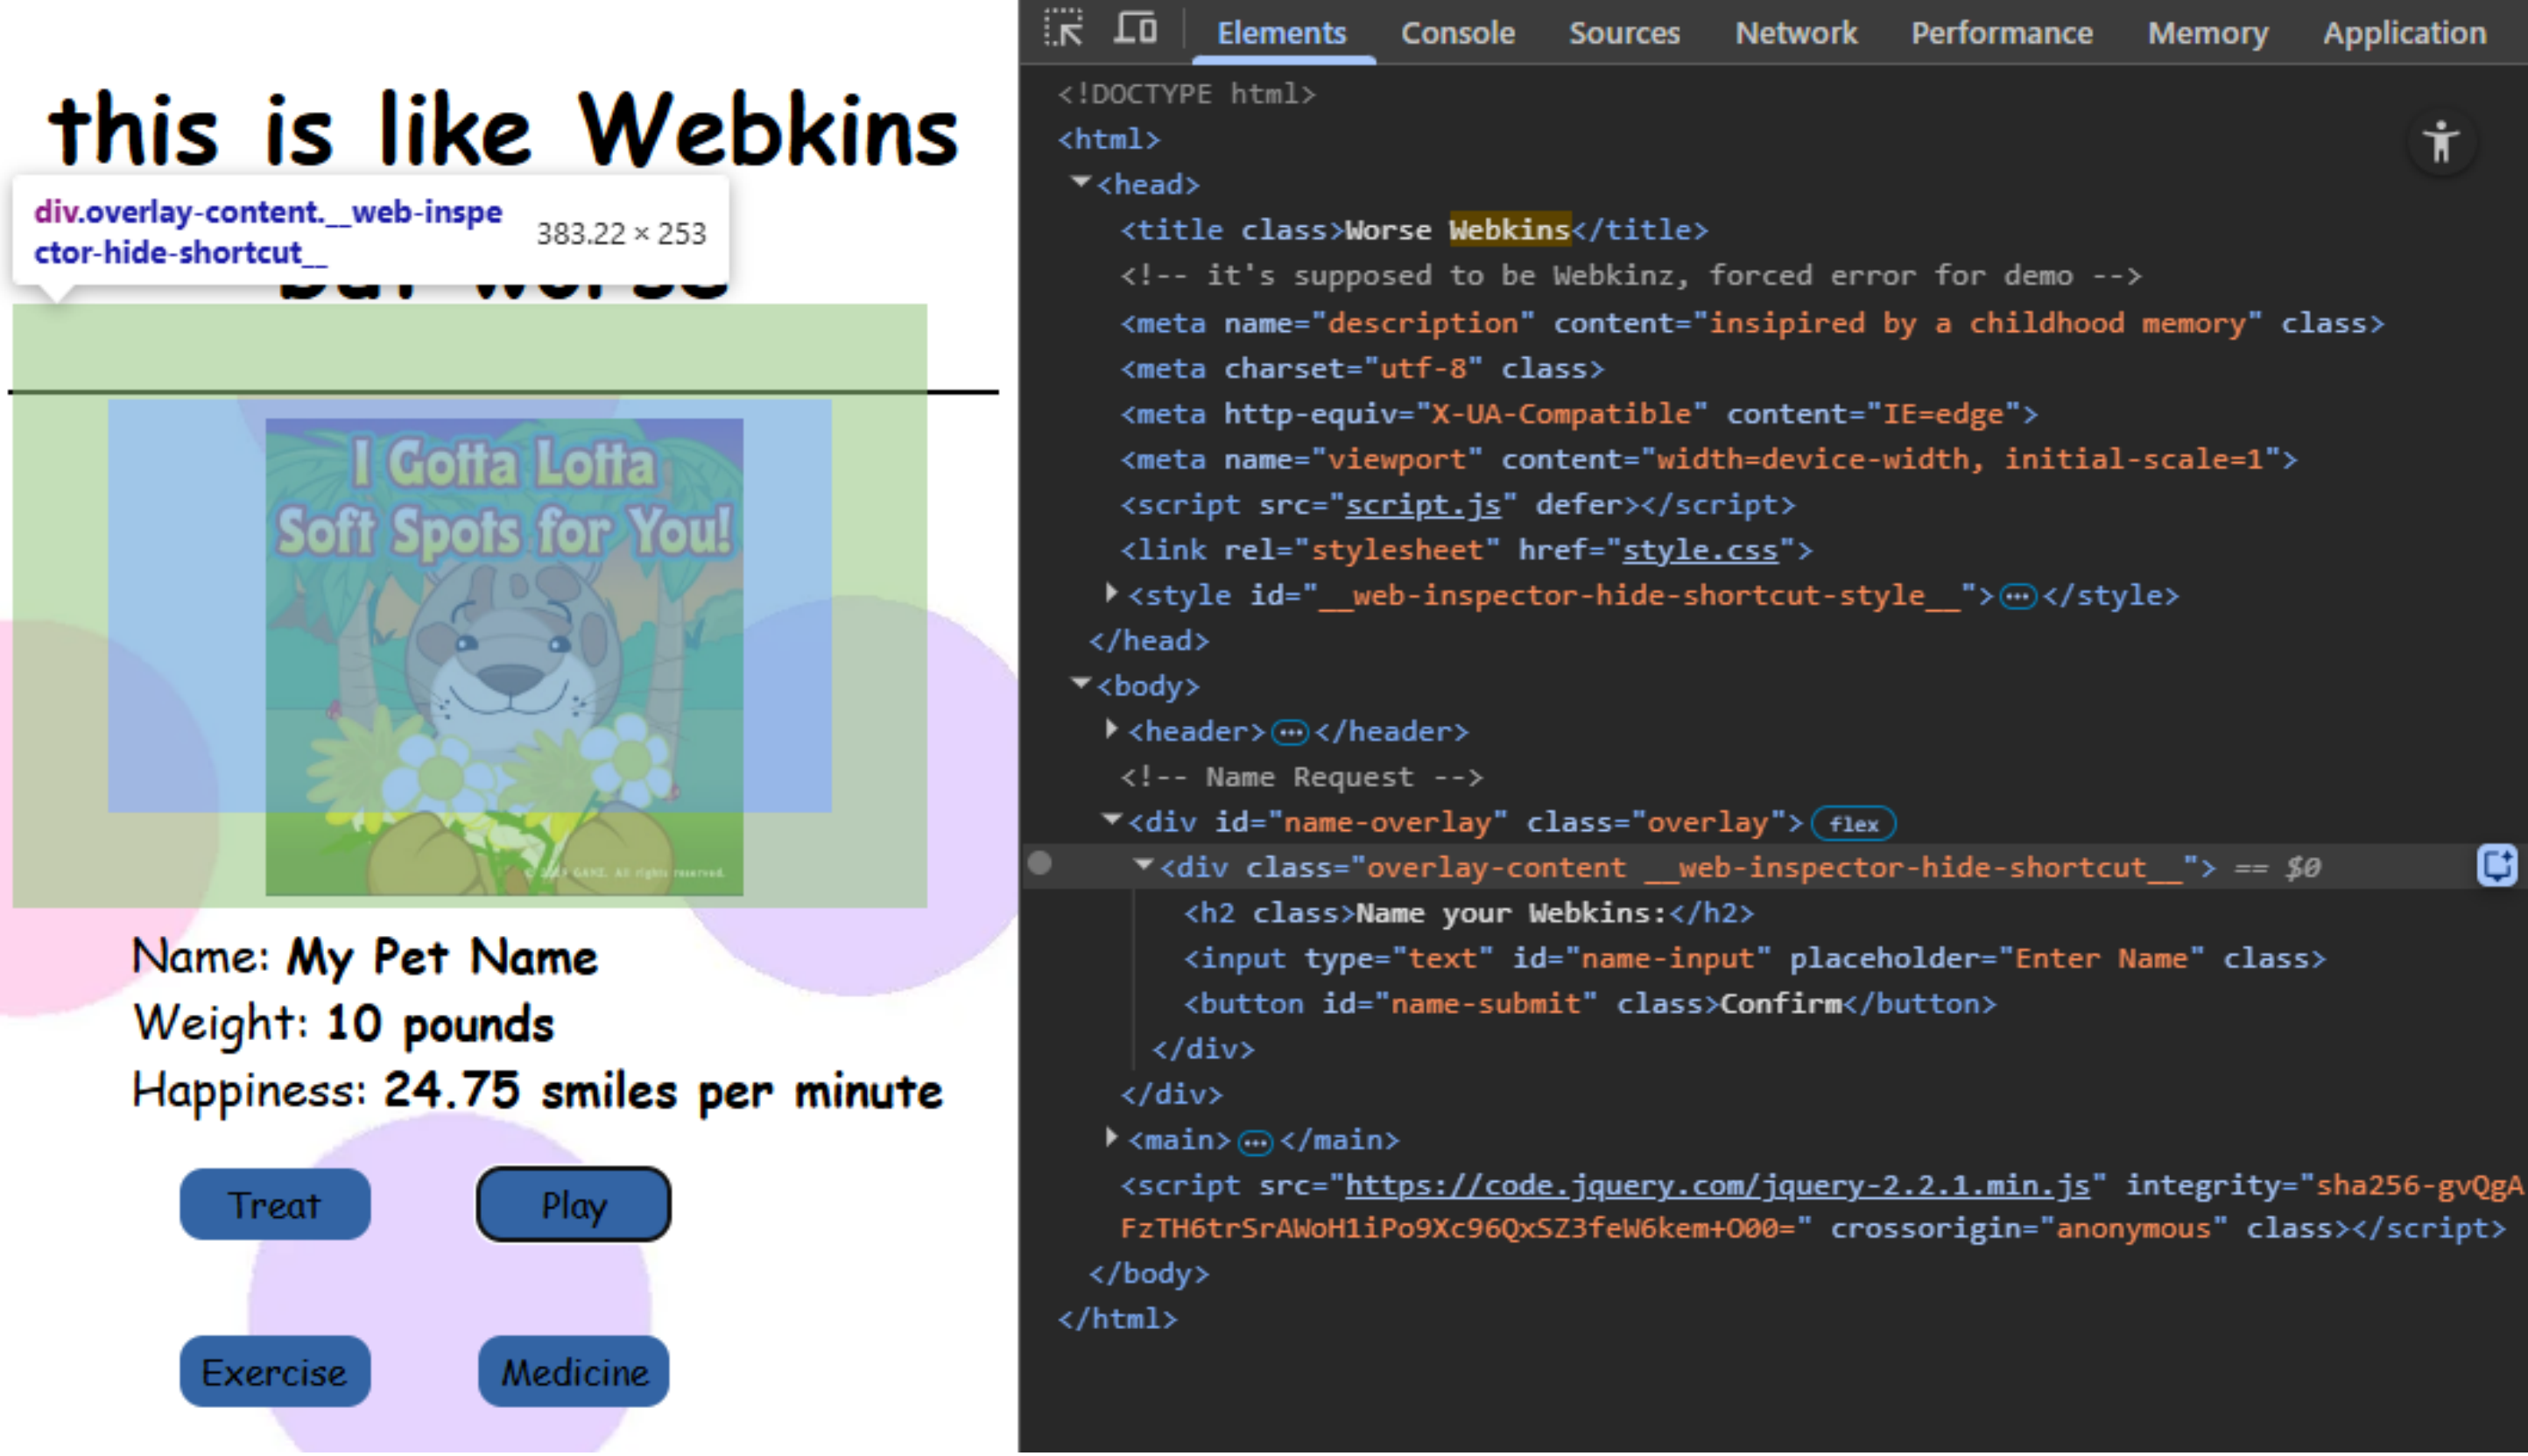

2. wait, every instance of "Webkins" is wrong

3. correcting each instance to say "Webkinz" instead

4. in fact why bother naming the pet, I want to play now and it doesn't break

5. also I can easily swap the dashboard with the pet if I want
